

# Migration of system from SAP ECC 6.0 to S/4 HANA

## We follow S/4 HANA Migration rules

- ✓ Building an integrated schedule
- ✓ Sandbox and proto typing
- ✓ House Keeping and Solution Manager
- ✓ Change management
- ✓ Test Management
- ✓ Sizing, Architecture, Back up & Recovery

## Our Approach

## Challenges

- ✓ Inconsistent in Match code objects during DB migration
- ✓ Alignment issues in Print Preview after DB Migration. Addressed in SUM tool
- ✓ Change custom programs to adapt as per HANA Standards
- ✓ Migration issues because of Native SQL statement

## Project Description

A manufacturing customer is running his business on SAP ECC and BW platform. Since his business is spread across 30 nations, a lot of unnecessary data is stored in the database which is of no use to him. He wants to experience true essence of SAP products and in order to achieve this, SAP HANA is the best platform. In SAP HANA, reporting is user friendly and system performance is much faster.

## Client Benefits

- ✓ Quick implementation of SAP HANA using Optimizing Techniques
- ✓ Performance of Reports is improved by 40-70%
- ✓ Free Fiori Package for SAP on Mobile helped in launching the mobile application faster
- ✓ Core data services, which is used to push business logic to DB level, reduced the data transfers
